

# Integration of Hi-Lite in MyCCM

Thomas Vergnaud

## Questions

- ◆ What to check in the source code?
- ◆ Where to put what information for that?

## In interface definitions

- ◆ Associate pre and post conditions to operation declaration
- ◆ Then generate the corresponding “with” statements in source code
  - Code of component envelopes
  - Code of component implementation

## Problem

- ◆ Envelope source code uses pointers (accesses)
  - Not conformant with Alfa
  - These accesses are in the heart of MyCCM: they cannot be removed
- ◆ Current investigation: put additional code above these accesses
